ABOUT ME

Certified Cybersecurity Engineer (RCCE) and Python Developer specializing in Secure Data Automation. Proven experience at UOB automating high-volume transaction entry and synchronization for IBM AS400 legacy systems. Adept at deploying Agentic AI and managing hardened server infrastructure to ensure data integrity and security in hybrid work environments.

CORE COMPETENCIES

Development & Languages:
Python (Flask & Automation)
Java, C#, C++, SQL
VBA macros
API & Bot Development

Automation & AI:
LLM Deployment & Agent AI
Computer Vision
Power BI & Data Visualization
Financial Anomaly Detection

Systems, Security & Net:
Linux Server Administration
Pentesting & OSINT
Mesh VPN & Zero Trust
Defensive Hardening & Firewalls

CERTIFICATES and LICENSES

1) **Rocheston Certified Cybersecurity Engineer Level 1** **[June 2025 – June 2027]**

2) **Rocheston Certified Cybersecurity Engineer Level 2** **[July 2025 – July 2027]**

PERSONAL PROJECTS

1) AI Agentic Discord Chatbot

- ***Edge AI Deployment****: Deployed a locally hosted Large Language Model (LLM) integrated with a Discord bot to facilitate private, autonomous AI interactions.*
- ***Data Privacy & Governance:*** *Utilized self-hosted architecture to ensure complete data privacy, allowing for custom model tuning and granular control over conversational logging and behavior.*
- ***Full-Stack Integration****: Connected the AI agent to internal system APIs, enabling the bot to perform task-oriented "agentic" workflows rather than just basic chat.*

2) Secure High-Performance Server Infrastructure (Raspberry Pi 5)

- ***Infrastructure Engineering:*** *Engineered a high-reliability hosting environment on a Raspberry Pi 5 (8GB RAM) with a 512GB SSD to optimize data I/O and system uptime for high-traffic applications.*
- ***Game Server Hardening:*** *Deployed and maintained a hardened Minecraft server instance; performed Java Virtual Machine (JVM) tuning and specialized resource allocation to ensure high performance under heavy player loads.*
- ***Defense-in-Depth****: Implemented multi-layered security using Fail2Ban, Linux firewalls, and Auth plugins to mitigate brute-force and DDoS threats common to public game servers.*
- *Developed a Python-based Discord Command & Control (C2) bot to remotely monitor server health, automate startup/shutdown cycles, and log real-time system status.*

3) Secure Networking & DNS Sinkhole (Raspberry Pi 5)

- ***Network-Wide Adblocking****: Configured a DNS-level adblocker (AdGuard Home) to filter malicious domains and tracking across all connected devices.*
- ***Zero-Trust Connectivity:*** *Deployed a Tailscale/WireGuard VPN server to provide encrypted, remote access to the entire distributed lab without exposing public ports.*

PROFESSIONAL EXPERIENCES

1) ***Junior Python Developer: United Overseas Bank*** *[October 2025 – Present]*

- ***System Integration****: Modernized Transaction Operations by deploying Python-based automation that eliminated manual legacy system bottlenecks between AS400 and modern data workflows.*
- ***Financial Accuracy****: Spearheaded the automation of the transaction auditing lifecycle, leveraging custom VBA logic to eliminate manual processing bottlenecks and improve the reliability of anomaly detection systems.*
- ***Data Intelligence****: Developed high-impact Business Intelligence (BI) solutions by architecting real-time Power BI dashboards that translated complex operational data into actionable strategic insights for leadership.*

2) ***Software Developer: Hi-Security Consulting Sdn Bhd*** *[July 2024 – August 2025]*

- ***Full-Stack Analytics****: Developed and deployed real-time web analytics dashboards using Python (Flask), integrating end-to-end data collection and visualization components.*
- ***Real-time Monitoring****: Created an automated Telegram alert bot in Python, linking analytics dashboards to instant notifications for critical data events.*
- ***AI Optimization****: Supported the fine-tuning of an AI-powered vehicle detection system, improving model performance and data accuracy through computer vision refinements.*

3) ***PROTÉGÉ ICT engineer: Mindmatics Sdn Bhd*** *[March 2024 – June 2024]*

- ***Workflow Automation****: Designed and deployed Python automation scripts to streamline staff record-keeping, eliminating manual entry errors and improving data accuracy*
- ***System Reliability:*** *Maintained and optimized internal company systems by focusing on data flow efficiency and process automation.*
- ***Infrastructure Support****: Provided hardware troubleshooting and integrated physical systems with software-based solutions to maintain high IT operational uptime.*

4) ***Internship: FWD Insurance Berhad*** *[March 2023 - August 2023]*

- ***Operational Efficiency****: Managed IT application ticket data and updated technical documentation to improve workflow transparency and request tracking.*
- ***Infrastructure Automation****: Collaborated with the IT Infrastructure team to automate device tracking and optimize inventory data using Python tools.*
- ***Process Improvement****: Streamlined software deployment processes for company staff, leveraging automation to reduce deployment lead times.*

EDUCATION & ACHIEVEMENT

1) **Bachelor of Computer Science (Hons.)** **[2020-2023]**
   Management and Science University, Shah Alam, Selangor

2) **Matriculation** **[2018-2019]**
   Johor Matriculation College, Tangkak, Johor

3) **Sijil Pelajaran Malaysia** **[2013-2017]**
   MARA Junior Science College Parit, Parit, Perak
