ABOUT ME

Certified Cybersecurity Engineer (RCCE) and Python Automation Specialist specializing in Secure Data Automation. Proven experience at UOB building Python-based RPA applications for high-volume transaction processing across internal banking web portals and IBM AS400 legacy systems. Adept at deploying Agentic AI and managing hardened server infrastructure to ensure data integrity and security in hybrid work environments.

CORE COMPETENCIES

Development & Languages:	Automation & AI:	Systems, Security & Net:
Python (Flask & Automation)	LLM Deployment & Agent AI	Linux Server Administration
Java, C#, C++, SQL	Computer Vision	Pentesting & OSINT
VBA macros	Power BI & Data Visualization	Mesh VPN & Zero Trust
API & Bot Development	Financial Anomaly Detection	Defensive Hardening &
	Playwright	Firewalls

CERTIFICATES and LICENSES

1) Rocheston Certified Cybersecurity Engineer Level 1	[June 2025 – June 2027]
2) Rocheston Certified Cybersecurity Engineer Level 2	[July 2025 – July 2027]

PROFESSIONAL EXPERIENCES

1) UAT Automation Tester (Contract via PositiveLinks)	[October 2025 – Present]
Python & Playwright RPA (Web): Engineered a Python-based RPA desktop application utilizing Playwright to automate high-volume transaction processing and data synchronization across internal banking web portals. Legacy System Automation (AS400): Developed a specialized RPA app to interface directly with IBM AS400 legacy systems, eliminating manual bottlenecks between core mainframe databases and modern operational workflows. Financial Auditing & Accuracy: Spearheaded the automation of the transaction auditing lifecycle, leveraging custom VBA logic to eliminate manual processing bottlenecks and improve anomaly detection reliability. Data Intelligence & Reporting: Architected real-time Power BI dashboards translating complex operational and testing data into strategic actionable insights for leadership.	
2) Software Developer: Hi-Security Consulting Sdn Bhd	[July 2024 – August 2025]
Full-Stack Analytics: Developed and deployed real-time web analytics dashboards using Python (Flask), integrating end-to-end data collection and visualization components. Automated System Alerts: Created a Python Telegram bot linked to analytics pipelines to trigger instant notifications for critical system events. Edge AI & Computer Vision Support: Assisted in fine-tuning an AI-powered vehicle detection model through computer vision optimizations, enhancing detection accuracy and dataset quality.	
3) PROTÉGÉ ICT engineer: Mindmatics Sdn Bhd	[March 2024 – June 2024]
Process Automation: Developed Python scripts to automate internal record-keeping, eliminating manual data entry errors. Systems Maintenance: Optimized internal system data flows and hardware-software integrations to sustain operational uptime across internal IT infrastructure.	

4) **Internship: FWD Insurance Berhad**

[March 2023 - August 2023]

- **Operational Efficiency:** Managed IT application ticket data and updated technical documentation to improve workflow transparency and request tracking.
- **Infrastructure Automation:** Collaborated with the IT Infrastructure team to automate device tracking and optimize inventory data using Python tools.
- **Process Improvement:** Streamlined software deployment processes for company staff, leveraging automation to reduce deployment lead times.

PERSONAL PROJECTS

1) **AI Agentic Discord Chatbot**

- **Edge AI Deployment:** Deployed a locally hosted Large Language Model (LLM) integrated with a Discord bot to facilitate private, autonomous AI interactions.
- **Data Privacy & Governance:** Utilized self-hosted architecture to ensure complete data privacy, allowing for custom model tuning and granular control over conversational logging and behavior.
- **Full-Stack Integration:** Connected the AI agent to internal system APIs, enabling the bot to perform task-oriented "agentic" workflows rather than just basic chat.

2) **Secure High-Performance Server Infrastructure (Raspberry Pi 5)**

- **Infrastructure Engineering:** Engineered a high-reliability hosting environment on a Raspberry Pi 5 (8GB RAM) with a 512GB SSD to optimize data I/O and system uptime for high-traffic applications.
- **Game Server Hardening:** Deployed and maintained a hardened Minecraft server instance; performed Java Virtual Machine (JVM) tuning and specialized resource allocation to ensure high performance under heavy player loads.
- **Defense-in-Depth:** Implemented multi-layered security using Fail2Ban, Linux firewalls, and Auth plugins to mitigate brute-force and DDoS threats common to public game servers.
- **C2 Automation:** Developed a Python-based Discord Command & Control (C2) bot to remotely monitor server health, automate startup/shutdown cycles, and log real-time system status.

3) **Secure Networking & DNS Sinkhole (Raspberry Pi 5)**

- **Network-Wide Adblocking:** Configured a DNS-level adblocker (AdGuard Home) to filter malicious domains and tracking across all connected devices.
- **Zero-Trust Connectivity:** Deployed a Tailscale/WireGuard VPN server to provide encrypted, remote access to the entire distributed lab without exposing public ports.

EDUCATION & ACHIEVEMENT

- | | |
|--|-------------|
| 1) Bachelor of Computer Science (Hons.)
Management and Science University, Shah Alam, Selangor | [2020-2023] |
| 2) Matriculation
Johor Matriculation College, Tangkak, Johor | [2018-2019] |
| 3) Sijil Pelajaran Malaysia
MARAJunior Science College Parit, Parit, Perak | [2013-2017] |
